

Iran

Sabotage Ranking - Has Weapons-Usable Nuclear Materials

Iran ranks at the bottom of the sabotage ranking. The lack of available information on Iran’s nuclear security—it does not publish its nuclear security laws and regulations or other information—impacted Iran’s low score. If it published this information, its score in a future edition of the NTI Index might increase. Iran could also further improve its nuclear security conditions by ratifying key international legal agreements, undertaking voluntary commitments, taking steps to build confidence in its security, and establishing an independent regulatory agency. Iran’s nuclear security conditions are adversely affected by political instability, governance challenges, and corruption.

	Score / 100	Rank / 45
OVERALL	24	=44
Number Of Sites	80	=15
Security and Control Measures	30	=40
Global Norms	13	44
Domestic Commitments and Capacity	5	45
Risk Environment	32	37

Above Average

Scores greater than 66

- Quantities and Sites
 - Quantities of Nuclear Materials
 - Sites and Transportation
 - Material Production / Elimination Trends
- Security and Control Measures
 - Response Capabilities

Average

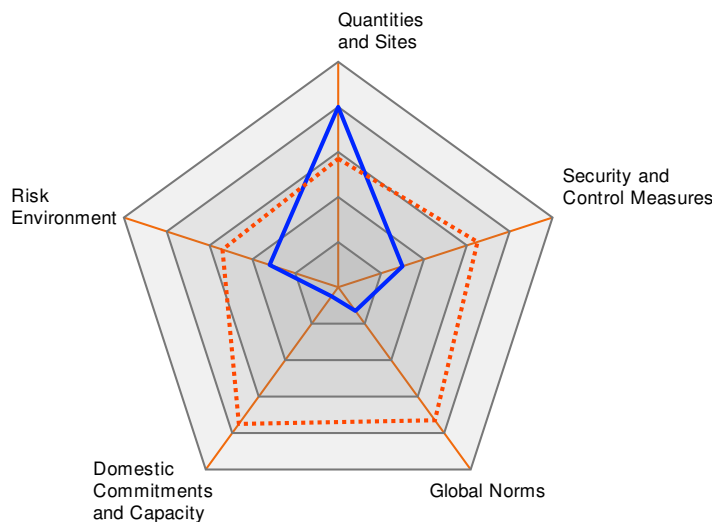

Scores between 34 and 66

- Security and Control Measures
 - On-site Physical Protection
 - Physical Security During Transport
- Domestic Commitments and Capacity
 - Safeguards Adherence and Compliance
- Risk Environment
 - Political Stability
 - Effective Governance
 - Group(s) Interested in Illicitly Acquiring Materials

Below Average

Scores less than 34

- Security and Control Measures
 - Control and Accounting Procedures
 - Insider Threat Prevention
 - Cybersecurity
- Global Norms
 - International Legal Commitments
 - Voluntary Commitments
 - International Assurances
- Domestic Commitments and Capacity
 - UNSCR 1540 Implementation
 - Domestic Nuclear Materials Security Legislation
 - Independent Regulatory Agency
- Risk Environment
 - Pervasiveness of Corruption
